

foodos

User's Problem

- Users are paying **higher price** for their food without knowing that.
- Users are being tricked by existing food delivery platform by showing offers which are not transparent
- User can't order food from small food stalls
- Users can't order from 2 restaurants in single order

Restaurant's Problem

- Increasing Commission from delivery platform
- Investing in advertisement to strive on market
- Restaurants are not getting recognition for their offers, but delivery platforms are.
- Social profile for restaurants – to show their new dishes or new infrastructures
- Restaurants don't have software to manage procurement, yield and inventory.

Our Solution

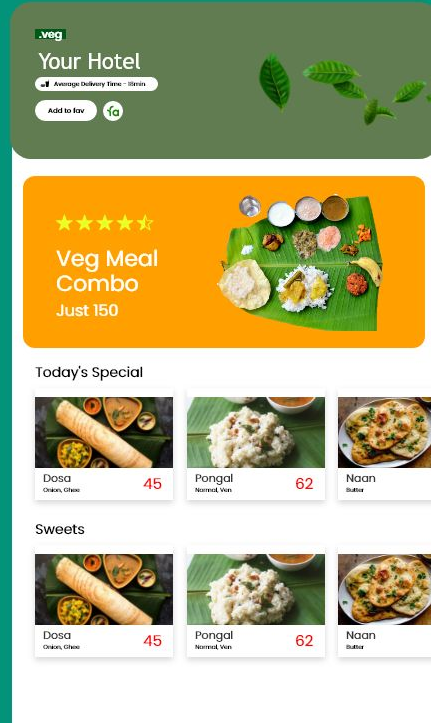

By providing a Mobile delivery application for restaurant to deliver their food, **with no commission at all.**

As we take no commission, user will see the real price of the dish in our platform.

We provide procurement and yield management software for restaurants to increase productivity.
